Education

Franklin University — September 2024-Present
Master's in Computer Science Focus: Data Analytics — GPA: 3.78

Skills

Programming Language: HTML, CSS, JavaScript, Java, Python.
Data and Analytics: SQL, Advanced Microsoft Excel, Tableau, Data Visualization, KPI Analysis, Business Data Interpretation, Statistical Analysis, Informatica.
Certifications: Google Data Analysis, Google Project Management, GenAI Landscape, ITDMS, Programming Using Java, Data Analysis and Visualization.
Frameworks and Libraries: Java Spring boot, React.js, Tailwind CSS, Node.js, Next.js, Express.js, Pandas, NumPy, TensorFlow, Scikit-Learn, Matplotlib.
Cloud and DevOps: Linux, AWS, Jenkins, GitHub, Docker, Kubernetes, Terraform, CI/CD.
Databases and Other tools: MySQL, PostgreSQL, MongoDB, RESTful APIs, Postman, Selenium, TestNG, Junit.
Hackathon: Adobe India Hackathon, Google Gemini – Gen AI Hackathon.
Cybersecurity: Wireshark.

Professional Experience

Faculty Assistant | Franklin University — October 2024 – Present

- Maintain weekly incident reports; assist with account setup, permission changes, and software installation/configuration.
- Conduct briefings on new tools and IT policies; train users in security best practices (e.g., phishing, password hygiene).
- Support installation, configuration, and verification of software updates, system patches, and digital certificates, helping ensure systems follow institutional security and compliance standards.
- Assist with user identity and access management, including secure account provisioning, permission changes, and enforcing least-privilege access principles across university systems.
- Perform basic system diagnostics and troubleshooting, helping faculty resolve software, connectivity, and platform-related issues.
- Support faculty with system updates, software troubleshooting, and user access using Zoom and MS Teams

Software Engineer | Infosys Ltd — May 2022 – August 2024

- Built backend microservices in Java and Spring Boot for an e-commerce platform serving clothing and cosmetics brands, supporting catalog, customer, and order workflows.
- Used Kafka to support asynchronous event handling for order updates, recommendation workflows, and customer support notifications across services.
- Used Redis for caching frequently accessed product and customer data, improving response time and reducing repeated database lookups.
- Developed REST APIs for product discovery, cart, checkout, order tracking, and account-related features across the platform.
- Wrote and optimized SQL queries in PostgreSQL, MySQL, and SQLite to support application functionality, business reporting, and data retrieval needs.
- Improved a product recommendation feature using customer browsing history, purchase behavior, and product preferences to surface more relevant items.
- Supported a predictive recommendation workflow that used shopping patterns and past interactions to recommend products aligned with likely upcoming customer needs.
- Contributed to an AI-assisted customer support feature that helped users with returns, reorders, product issues, delivery questions, and general shopping support.
- Helped build an AI-assisted product description feature that used reviews, customer comments, and product details to create clearer and more engaging product content.
- Participated in debugging, code reviews, and log analysis using Git and lower environment testing to support issue resolution and feature validation.
- Assisted with deployment validation in AWS-based environments and collaborated with QA and business stakeholders to refine and test new functionality.

QA Automation Engineer | Global Step — January 2021- April 2022

- Designed and implemented a modular Selenium WebDriver framework supporting cross-browser and regression testing, reducing manual QA effort by 50% and accelerating release cycles.
- Authored and optimized complex SQL queries for backend data validation, ensuring 100% data integrity across multiple environments and strengthening system reliability.

- Integrated automated test suites into Jenkins CI/CD pipelines, cutting build verification time by 40% and enabling faster, more reliable deployments.
- Spearheaded the adoption of API automation testing (REST Assured & Postman), expanding test coverage by 25% and uncovering critical backend issues before production.
- Collaborated with developers and product managers to define test strategies and acceptance criteria, ensuring automation aligned with evolving business requirements.
- Created detailed test reports and dashboards to track defect trends and coverage metrics, improving visibility for leadership and reducing bug leakage into production.

Projects

Food Delivery Application | React, Node.js, Java, MySQL.
Developed a full-stack food delivery platform with real-time order tracking, secure payments, and user-friendly UI. Integrated React, Node.js, and MySQL, enhancing order efficiency by 40% and improving user experience.

Clients Websites Development | Website_1, Website_2, Website_3, Website_4.
Designed and developed responsive websites for clients using HTML, CSS, JavaScript, and WordPress, optimizing user experience.
Enhanced website performance, reducing load times by 50% and improving SEO rankings.
Integrated CMS, payment gateways, and custom features based on client needs.

Blog/Post Full Stack Web Application | https://github.com/Invoker011/our-backend-project | Javascript, EJS, Node.js, Express.js, Linux
Built and deployed a dynamic blog platform with user authentication and CRUD functionality.
Developed RESTful APIs and integrated SQLite for data persistence, improving scalability and code maintainability.
Implemented responsive EJS templates and planned Docker-based deployment for production use.

Amazon Website Clone | https://github.com/Invoker011/javascript-amazon-project | Javascript, HTML, CSS
Built a responsive e-commerce web app simulating Amazon's shopping experience with product listings, dynamic cart updates, and order tracking.
Implemented real-time pricing logic using JavaScript and optimized UI for mobile and desktop compatibility.

LeetCode | https://github.com/Invoker011/LeetCode | Java
Solved algorithmic and data structure problems on LeetCode, focusing on arrays, linked lists, trees, graphs, and dynamic programming.
Developed optimized Java solutions emphasizing time and space complexity, improving problem-solving efficiency and coding fluency.
Maintained a structured GitHub repository documenting solutions with explanations and complexity analysis for future reference and learning.

Expense Tracker | https://github.com/Invoker011/Expense_Tracker | Python.
Engineered a command-line expense management system with automated monthly data sorting and Excel integration, streamlining expense tracking workflows.
Implemented structured data entry with validations for date, category, and amount, leveraging Pandas and OpenPyXL for backend automation.
Improved usability through dynamic file generation and modular design, reducing manual categorization effort by 80% and ensuring reliable data consistency.
